

REMARKS

The present amendment is being submitted concurrently with an Appeal Brief under 37 CFR 41.37.

The specification has been amended to correct three occurrences of a typographical error. This error was discovered during preparation of the Appeal Brief being submitted concurrently herewith.

Support for the amendments can be found throughout the application as originally filed. In particular, Applicants note that the specification as filed refers to “The original frequency F2 and target frequency F1” (see page 9 lines 16-17) and “enhanced base station 38 is carrying on its own traffic with other subscriber stations (not shown) within coverage area 50 at frequency F2, while simultaneously transmitting CDMA re-direction signal 66’ at frequency F1” (see page 11, lines 20-22). Also, the specification mentions that “while subscriber station 42 is communicating its voice call T(F1) with base station 34, it is also receiving beacon trigger signal 66’ from base station 38, which is also being carried at frequency F1 and is therefore receivable by subscriber station 42 which is currently operating frequency F1 as it communicates with base station 38” (see page 11, line 27 to page 12 line 3). Fig. 7 also clearly support the notion that the converted handoff signal 66’, in order to be properly received by subscriber station 42, should be at F1 (which results from converting handoff trigger 66’ originally at F2.)

CONCLUSION

Entry of the amendment is respectfully requested.

Respectfully submitted,

Sanro Zlobec, Reg. No. 52,535
Agent for the Applicants
